Our new embedded profiles for soccer goals

internal corner support

embedding for net support bars

embedding for ground frame

Even Stronger, for you!

The Schäper soccer goals are known throughout history, to be sturdiest built goals worldwide. In our urge to maintain this proud title, we found a way to make our goals even stronger. Along with the internal corner supports (which reinforces the the goal frame welding joints), we now embed the net support bars and the ground frame into the goal frame. The net support bar and ground frame are no longer “simply” set upon the frame – these are now partly let into the goal frame to be welded.

Can't get any sturdier than that!!
